【NEW PRODUCT】

Releasing “LaRgo,” the FS700P series

Equipped with a right and left independent differential feed adjustment mechanism
4-needle flat seamer with “Oil Barrier” effectiveness

PEGASUS SEWING MACHINE MFG. CO., LTD. (Headquarters: Fukushima-ku, Osaka, President: Shigemi Mima) will begin releasing “**LaRgo,**” the **FS700P series equipped with a right and left independent differential feed adjustment mechanism**, hereinafter called “LaRgo (pronunciation: /lá:rgou/),” simultaneously to the world market on January 11, 2018.

The new product, LaRgo is most suitable for sewing functional fabrics, employed for sportswear and similar garments. The focus on sportswear with designs employing mesh fabrics with excellent breathability and stretchable fabrics with excellent stretchability has increased markedly in recent years. However, these designs require highly skilled operators when sewing these fabrics with different features. In order to solve these problems, PEGASUS has developed the LaRgo, equipped with the world’s first, right and left independent differential feed adjustment mechanism. Thanks to these excellent features, this flatseamer consistently produces beautifully finished products regardless of the skill of the operator.

The outline of this new product is as follows.

FS700P series “LaRgo”
Equipped with a right and left independent differential
feed adjustment mechanism

■ Product outline

“LaRgo,” the FS700P series equipped with a right and left independent differential feed adjustment mechanism (pronunciation: /lá:rgou/)

Oil Barrier type, 4-needle, feed-off-the-arm, interlock stitch machine for flatseaming
(To prevent right or left misalignment of the fabric)

Smoothly advancing with you.

No matter what the circumstances, no matter the operator.
Needle and threads advance smoothly at the sewer's own pace.
Stitching is straight and beautiful without worry.

This precise and soothing rhythm will
accurately guide those that follow.

LaRgo, with needle and thread, seams smoothly, drawing on long cultivated
technical skills and the daily genesis of imagination.

We move forward into the future together.

■ Main features

* The LaRgo can perform sewing easily and beautifully.

- The LaRgo easily and beautifully performs seaming on functional fabrics that have varying degrees of stretchability, such as mesh fabrics and stretchable fabrics that are employed for sportswear and similar garments. The operator does not require any special skills, such as the ability to perform sewing the fabric while stretching it properly. This flatseamer can maintain consistent quality on the finished products, regardless of the skill of the operator. Accordingly, the loss of defective products is decreased and productivity is increased.

* The LaRgo stands out by featuring a “right and left independent” differential feed adjustment mechanism.

- A standard feed mechanism feeds the same amount of the fabric consistently. The LaRgo has a differential feed ratio adjustment lever on the right and left sides independently, which means that the LaRgo can adjust the differential feed ratio separately for the right and left hand sides. Thanks to this feature, the proper feeding amount can be set and you will be able to sew up the fabric as you like.

* Why do we call the LaRgo?

- The letters L and R on the LaRgo come from the initial letters of “Left and Right” included in the description of the world’s first left and right independent differential feed adjustment mechanism. In addition, the name “LaRgo” can be associated with a term in musical terminology that means “to play with the sound flowing.”

Please refer to our product catalog for more information.

News Release

■ Release date

January 11, 2018 (on the world market)

For more information, see the special site (see below).
