

## PEGASUS at Texprocess Frankfurt 2026

April 21(Tue.) — 24(Fri.)  
Messe Frankfurt Hall 8, Germany  
<PEGASUS Booth No. Hall 8-G59>

PEGASUS EUROPA GmbH (Headquarters: Kaiserslautern, Germany, President: Hiroyuki Iuchi), a subsidiary company of PEGASUS CO., LTD. (Headquarters: Fukushima-ku, Osaka, Japan, President: Shigemi Mima), will set up a booth at the Texprocess Frankfurt 2026. This event will be held for Four days, from April 21 (Tue.) through April 24 (Fri.) at Messe Frankfurt Germany.

We have high hope the trade show could satisfy our customers not only in European countries known for their high-quality apparel and fashion sense, also in rapidly growing markets such as Turkey, Eastern Europe, and North Africa.

The outline of PEGASUS's highlighted exhibits is as follows.

### ● Highlighted products

**MX5214-A-03/333-2X4/KS8E/D442/Y3222**

**MXneo Series, Built-in Electronic Equipment Integrated Type, 2-needle Overlock Sewing Machine**

- Since the motor, control box and operator panel are integrated in the sewing machine body, it is so easy to setup as no need to mount electrical components on the table.
- This overlock machine have typically equipped with a thread trimmer (KS), automatic presser foot lifter (PL), and pneumatic dust collector (LC).
- The air-saving function contribute to energy efficiency only when necessary—such as cutting fabric or thread.
- The voice guidance features in eight languages (English, Chinese, Turkish, Spanish, Bengali, Vietnamese, Portuguese, and Indonesian.) support sewing operations.

## FRA Series EXT5114-03/333N-2X4/KS380/FR/DA4A/Y2288/PT

### Variable top feed, cylinder bed, overlock machine for attaching tubular elastic ribs

- FRA series is a deskilling unit for attaching neck and hem ribs of T-shirts and sweatshirts.
- The sensor automatically detect joint seam and align the starting sewing position when simply put the rib elastics into the roller, which could contribute to improve productivity and keep consistent quality.
- The tension of the rollers can be adjusted via the touch panel for matching the neckline cut design, ensuring a consistent finish regardless of the operator's skill level.
- The operator's operability can be improved while sensor control automatically opens and closes the fabric guides at the start and end of sewing.

## FS703P-A-WG2DX460-B/PD33/Z061/Y2299/PT

### Equipped with a right and left independent differential feed adjustment mechanism, oil barrier type, feed-off-the-arm, cylinder bed, 4-needle interlock stitch machines for flat seaming

- Seaming on functional fabrics that have varying degrees of stretchability, such as mesh fabrics and stretchable fabrics that are employed for sportswear and similar garments.
- The differential feed ratio can be adjusted separately, in order to respond to operations in which the machine is used to sew left and right side fabrics that have varying degrees of stretchability such as mesh fabrics and stretchable fabrics, and/or curved lines.
- The operator can handle the right- and left-hand side fabrics easily, without worrying about the different stretchability. The LaRgo achieves uniformly and beautifully finished products, regardless of the skill of the operator. These features reduce the operator's burden drastically and help increase productivity.
- The mid-feed differential feed mechanism (KL) can switch feed amount for left and right side fabrics while sewing. Even if different stretch rates of fabrics or curves, you can achieve a beautiful seam finish by minimizing fabric misalignment. Settings can be adjusted independently for each side and only one side.

※Please note that the Models and Details described above are subject to change without notice.
