PEGASUS

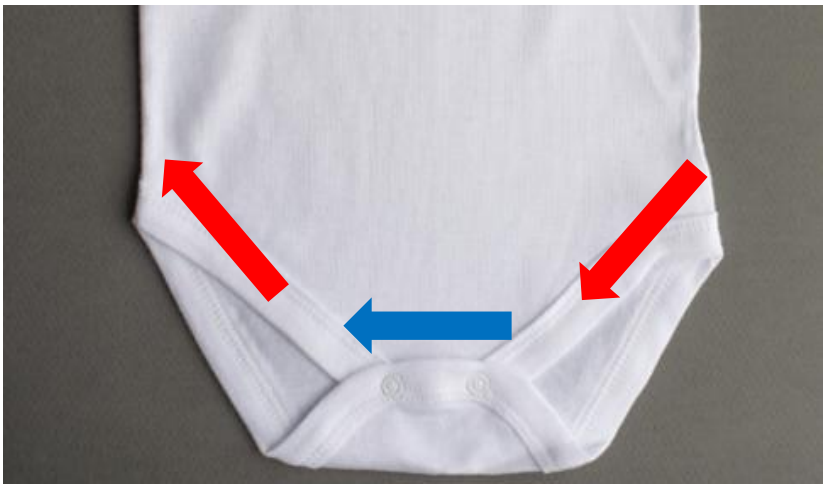
滚边工序去技能化
Deskilling tape binding process

AI

差动比自动切换装置
Automatic differential feed ratio switching

可根据面料弹性差异设定送布牙的差动比

Auto setting for differential feeding ratio according to the fabric elasticity



针对纵向弹性较弱的面料可适度拉伸

Less feeding ratio on horizontal part

针对横向弹性较强的面料可适度收紧

More feeding ratio for vertical part

缝纫过程中可通过针数控制自动切换差动比
即便在同一道工序中，面对面料的纵向、横向、斜向等
不同方向，也能实现均匀缝制。

Thanks to the differential feed ratio regulator (AI),the differential feed ratio can be automatically switched by stitch counting, so this machine sews the fabric uniformly in any direction, wale, course or bias.
